Which combination of fridge and freezer should I choose?

At Neff, we're constantly working to improve our range of built-in fridges and freezers so there's something for everyone.

So whether you need a streamlined space saver or a large American style fridge freezer that can cope with the demands of a hungry family, we're confident that there's a model to suit. It's the attention to detail that makes all the difference – frost free, AntiSpill shelves and CircoCool. And all our fridges have an 'A' energy rating, and are coated inside with a special anti bacterial system.

Left, model K9724

Choosing the right fridge and freezer

Options

There's something for everyone in our integrated refrigeration collection, so you can always find the fridge or freezer to meet your requirements.

Fridge with freezer compartment

Our integrated fridges with 4-star freezer compartments are the perfect solution if you don't need much freezing space. Pack away your entire week's shopping in the generous storage space and pop an indulgent tub of ice cream – or two – in the freezer compartment for long term storage.

Larder fridge

Larder fridges are so called because they provide a huge amount of space to keep all your fresh foods cool, just like a larder. Models include the extra large and eye level options, all featuring our latest technology and design.

Fridge/freezer

A fridge and a freezer designed to fit in a single housing unit. Each has its own door, but shares the same compressor unit, saving energy and money.

Matching fridge and freezer

A twinned fridge and freezer combination which can be built into a unit with the fridge on top of the freezer or a single fridge built in at eye level over a standard cupboard. Though these are both compact appliances they offer a surprising amount of storage space.

Built-under fridge and freezer

Our integrated side-opening fridge with a 4-star freezer fits snugly under your work surfaces to meet all your everyday needs. Or, if you prefer, the side by side installation offers a matching fridge and freezer combination, surprisingly roomy for such a compact appliance.

American style fridge freezer

They're big, they're bold, and there's plenty enough space for even the largest family's chilled and frozen storage requirements. American style fridge freezers with their trademark side-by-side doors and stainless-steel-finish cut a dash in any style of kitchen and are packed with useful features and functions. Neff has introduced its first free-standing model, **K3990** which sets new standards in design and practicality, and is fully clad in stainless steel top, sides and front.

It's really capacious, and comes with a unique temperature-controlled VarioBox, so you can store different types of food such as vegetables or meat at the most appropriate temperature. Wine bottles slot neatly into the supplied moveable wine rack. There's water and ice on tap too – the fridge freezer is plumbed in, has a 2.5 litre water storage tank, and is capable of producing 100 ice-cubes in 24 hours – more than enough for a party!

When you choose your fridge and freezer you should consider the following:

Are you looking for a separate fridge and freezer or a fridge with a built-in freezer?

See 'Options' opposite

Are you replacing an integrated fridge or freezer?

See 'Integration' on p197

What other functions are you looking for?

See 'Functions' on p199

Efficiency

Energy

We are right at the forefront of refrigeration technology. Not only are all the fridges and freezers in our current range free of harmful CFCs and HFCs, but all the appliances come with an 'A' rating. Some of the latest fridges can achieve the same storage temperatures as your local supermarket, allowing you to keep fresh fruit and vegetables at peak freshness for longer periods of time.

Temperature

Many of our new models have electronic controls so it's easy to maintain the exact temperature in the fridge at a glance. This means also you can operate the SuperFreeze function when you're freezing fresh food to lower the temperature for more rapid freezing. The SuperCool function can be used when you've done your weekly shop and are putting a lot of food into the fridge. By operating SuperCool, you are preventing the increase in temperature you'd normally expect when you add a large amount of fresh food. Once the food is cold, the temperature automatically reverts to the appropriate setting. Several new fridges also have special humidity controlled drawers, suitable for storing fruit and vegetables. Openings at the back of the drawers can be altered to control the flow of air and retain moisture.

Frost free

All our fridges feature an automatic defrost operation via the cold wall refrigeration system. Our freezer models **K9724** and **K3990** have the added benefit of being 'frost free'. This means you don't have to spend time defrosting your appliance, because it's done automatically before it has a chance to build up.

Images shown:

left, extra large larder fridge **K4624**

1 Removable magnetic door seal

2 Fixed hinge

3 Sliding hinge

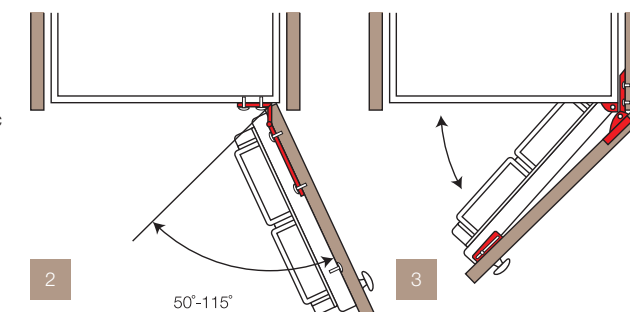

Integration

For total integration into your kitchen design, there are two types of appliance door hinges: fixed hinge or sliding hinge.

This provides two straightforward installation options – depending on your preference and the model being replaced.

Fixed hinge

The benefits of this type of hinge are that you can add more weight to the door, and open it at a larger angle, making access and use easier. The doors close automatically at an angle of approx 15%.

Sliding hinge

The hinged furniture door is attached to the appliance with a series of brackets. As the furniture door opens, the appliance door is opened via the sliding bracket arrangement. It's best to discuss your needs with a skilled kitchen fitter before installation.

FAQ

At what temperature should I keep the fridge compartment?

Between 0°C and 5°C. Any warmer, and the food will go off. Any colder, and fresh food can be ruined and nutrients lost. In addition, to maximise the freshness of your food you should look for an appliance with a fan or with CircoCool shelving so that hot spots are minimised.

Is it worth going for an energy-efficient fridge-freezer?

Your cooling appliance is operating 24 hours a day, 7 days a week, 365 days a year. After central heating, refrigeration appliances are the biggest domestic users of energy, because they're on all the time.

So when you're ready to replace a refrigeration appliance, it's worth looking for those rated A as they are energy-efficient and relatively cheap to run.

The range of Neff appliances are now all A rated – saving you money and optimising on energy consumption.

How can I ensure that my food is stored safely?

Neff appliances are designed and built to keep your food in the best condition and to ensure that everything stays fresher for longer. This includes giving you features such as accurate electronic controls, deli drawers, enhanced air circulation in the fridges with CircoCool shelving and ripple based vegetable containers.

Storing with your Neff fridge and freezer

Neff fridges and freezers are designed to keep your food as safe and fresh as possible. So now you can store everything you need with cool, calm confidence.

How does a 'frost free' freezer work?

Frost free freezers react to any signs of frost automatically, so it never has a chance to build up.

With a frost free freezer air is blown from the back wall and circulates over the items in the freezer. As a result, there is no condensation or build up of frost and food does not freeze together. This removes the hassle and time spent in defrosting, allowing time for other things.

Frost free features on models **K9724** and **K3990**, all other freezers will require occasional defrosting. All our fridges have an automatic defrost function.

Electronic controls

Many of the models in the collection feature electronic controls. These allow you to check the temperature at a glance and control it easily. It's also where you can activate the SuperCool and SuperFreeze functions.

SuperCool can be used when you're putting a lot of new food into the fridge. It allows for the increase in temperature that occurs when you add fresh food. As soon as the food is cold, the fridge will readjust to the normal temperature.

SuperFreeze is useful when you're freezing fresh food, as it lowers the temperature for more rapid freezing.

Functions

4-star freezer rating
Freezers with a 4-star rating are suitable for freezing fresh food and long term storage.

Anti bacterial system
This prevents the growth of micro-organisms on the interior walls of your fridge, providing a safe and hygienic environment for your food. This anti bacterial system doesn't harm the environment and will last as long as your fridge does.

AntiSpill trims
The shelves inside our fridges are made of safety glass and incorporate an AntiSpill trim, which will hold up to a pint of liquid, saving the food below if there's an accidental spillage.

Climate classification
Refrigeration appliances operate within specific ambient temperature ranges and are classified according to the maximum and minimum room temperatures they'll tolerate.

Fruit and vegetable drawer
Neff's fruit and vegetable boxes have been redesigned and improved. They now feature a rippled base, which allows air to circulate under the chilled produce, keeping it fresh and crisp for longer. You can also remove the box more easily, even when the fridge door is open at an angle of 90°. Selected models have a small inner tray that has been cleverly incorporated into the top. It's perfect for storing the small piece of lemon or onion you've kept to use later.

CircoCool®
The CircoCool® system uses vent holes at the back of the fridge shelves to create better circulation of air inside the fridge. This minimises 'hot spots' and creates a more even temperature throughout so that food stays fresher for longer.

Krypton light
The Krypton light is bright and natural, dramatically improving internal visibility. So there's no more struggling to find what you're looking for inside your fridge.

Freezers

Model No	G5624	G1524	G4344
Description			
Freezer	•	•	•
Built-in integrated	•	•	
Built-under integrated			•
Side-by-side slot-in (decor panelable)			
Number of doors	1	1	1
Right hinged, reversible doors	•	•	•
Fixed hinge fixing	•		•
Sliding hinge fixing		•	
Height mm	874	874	820
Special features			
Frost free freezer			
Transparent freezer drawers	•		•
SuperFreeze function	•		•
Berry tray	•		
Removable magnetic door seal	•		
Freezer drawers	4	4	3
Fast freeze button	•	•	•
Technical features			
Acoustic alarm			•
Anti bacterial system inside			
CFC-free refrigerant/insulation	•	•	•
HFC-free refrigerant/insulation	•	•	•
Automatic defrost fridge			
Freezer star rating ⁵	4	4	4
Adjustable thermostat fridge/freezer	-/•	-/•	-/•
Warning light	•	•	
Internal freezer temperature gauge			•
Technical information			
Total net capacity litres/ft³	98/3.5	98/3.5	100/3.5
Total fridge net capacity litres/ft³			
Freezer net capacity litres/ft³	98/3.5	98/3.5	100/3.5
Kg freezing capacity in 24 hrs	12	12	12
Storage time in power failure ⁵	20	16	24
Energy consumption in 24 hrs kWh ⁷	0.57	0.57	0.58
Annual energy consumption kWh ⁷	208	208	212
Annual running cost ⁹	£14.56	£14.56	£14.32
Energy classification ⁸	A	A	A
Operating climate zone ⁴	SN-ST	SN-ST	SN
Noise level (dB(A) re 1pW)	38	38	39
Supply voltage (V)	220-240	220-240	220-240
Total connected load (W)	90	90	80
Weight kg inc. packaging	40	36	38

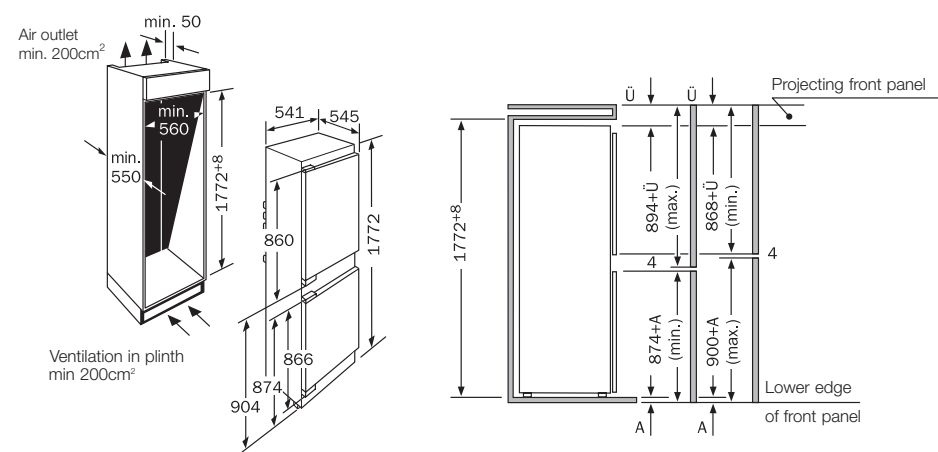

Notes
• = fitted/yes
¹ Freezer with basket, shelves and door compartments
² 0.5-3.0°C depending on ambient
³ One hinged door, one pull-out drawer
⁴ Cooling appliances are designed to operate within specific room temperatures:
N= +16°C to +32°C; SN= +10°C to +32°C, N-ST (16°C to +38°C), SN-ST= +10°C to +38°C
⁵ 4 star = freezer temperature -18°C or lower (plus fresh food can be frozen down)
⁶ Temperature rise time from -18°C to -9°C when fully laden
⁷ Energy consumption calculated in accordance with DIN standard EN153 1990 edition. Data enables a comparison to be made between similar models. The circumstances of practical operation may lead to deviations.
⁸ EC rating scheme to compare energy efficiency of similar models. As a guideline, classification A, B and C are very economical to economical, D is average and E to G represents higher to high consumption.
⁹ Based on 7p per kWh.
* For pull out drawer
